

Group GMO Policy

Cranswick plc are committed to working with our supply chain partners to ensure that the food products we supply to our retail, food service and food manufacturing customers are free from the presence of genetically modified ingredients, additives, flavourings or derivatives thereof.

Central to this commitment is an open working relationship with our raw material suppliers so that we can establish the ingredient make-up of the food stuffs we purchase. Where soya and maize is at risk we will obtain assurances that these are traceable to a proven non-genetically modified source.

If a genetically modified ingredient is identified or the genetic origin cannot be proven we will request our supplier to either remove the ingredient in question, or if it has a technical or organoleptic function, to replace it with an alternative ingredient from a proven non-genetically modified source.

We will obtain assurances from our suppliers that they will inform us, in advance, if the genetically modified status of any of our ingredients could change so that we can discuss this with our customers and agree a plan of corrective action so that the genetic status of the product is not compromised.

The availability of non-genetically modified crops is a complex issue and we are mindful that our policy must remain current therefore we will undertake to keep abreast of international developments and the availability of GMO free crops and share this information with our customers.

For Cranswick plc:
